

Takaprotocol Tokenomics:

We will issue our token called the Takaprotocol Token. A strict limit of 3 billion TPD will be created, never to be increased.

Ticker: TPD

Type of Token: Utility token

Total Supply: 3,000,000,000 TPD

Allocation of TPD Token

TPD Token Vesting Schedule

- **IDO/Public sale:**
2,100,000,000 TPD Tokens allocated for public sale will be released 2 months after the public sale finishes.
- **Team vesting plan:**
600,000,000 TPD Tokens allocated for team will be released as follows:

Initial release: 25%(150Million)

1st year: 25%(150Million)

2nd year: 25%(150Million)

3rd year: 25%(150Million)

- **Investors:** 300,000,000 TPD tokens allocated to Investors will be released linearly over 36 months.

TPD Value & The Burn

You can use TPD to pay for any fees on our platform, including but not limited to:

- Exchange fees
- Cross-chain fees
- Strategy creation fees
- Performance fees
- Other fees

When you use TPD to pay for fees, you will receive a significant discount:

Discount Rate

1st year: 50%

2nd year: 25%

3rd year: 12.5%

4th year: 6.75%

5th year: no discount

The Burn

Every quarter, we will destroy TPD based on the trading volume on our Decentralized exchange platform, until we destroy 50% of all the TPD.

We eventually will destroy 1.5 billion TPD, leaving 1.5 billion TPD remaining.

Funds Usage

- 35% of the funds will be used to build the Takaprotocol platform and perform smart contract audits.
And to ramp up team recruiting, training, and the development budget.

- 50% will be used for Takaprotocol branding and marketing, including continuous promotion and education of Takaprotocol and blockchain innovations in industry mediums.

A sufficient budget for various advertisement activities to help Takaprotocol become popular among investors, and to attract active users to the platform.

- 15% will be kept in reserve to cope with any emergency or unexpected situation that might come up.

About Takaprotocol

Takaprotocol is a decentralized exchange for discovering liquidity, trading multiple financial instruments (such as crypto, FX, commodities, and more) and assets management, when the DeFi ecosystem is in need of advanced trading tools to manage investment risks.

The Takaprotocol facilitate the transfer of funds from one blockchain to another, the exchange of assets, and creation of strategies by strategy managers.

This will in turn give investors the ability to monitor their fund managers performance in real time, and to earn passively by following their different strategies.

Takaprotocol Labs is the governance body that will develop, grow, and govern the product.

All of its products are owned and governed by its team members.
